Construction Observation

Construction Cost

\$8.5 Million

Key Staff

David Lustberg, Principal in Charge

James Ribaud, Project Manager

The Township of Millburn has undertaken a complete streets initiative to better balance the needs of all users of their downtown. Currently, the downtown is hindered by congestion and is a dangerous place for pedestrians as evidenced by the high volume of crashes.

Arterial teamed with Sam Schwartz to initiate a comprehensive study of the entire downtown which included a detailed transportation and urban design analysis. From this analysis, a number of streetscape and traffic calming design features were recommended. These recommendations were communicated extensively to the public through a series of community meetings. These features included narrowed travel lanes, reduction in the number of travel lanes, intersection bumpouts, mid-block crosswalks, traffic signal coordination, parking lot access and identification improvements, reverse angle parking, stormwater planters and significant improvements to the pedestrian amenities throughout the downtown.

Awards

2017 Complete Streets Excellence Award - NJDOT

2017 Excellence Award: Gold Built Project - Downtown New Jersey

2017 Great Streets Designee - APANJ
